

Environmental Policy

Thinking Ergonomix is dedicated to the principle of sustainable design and development. We believe in minimising the environmental impact of our products throughout their life cycle and within the manufacture and use of our products. We believe this is our responsibility towards future generations.

We do this by:

- implementing an environmental management system in accordance with ISO14001 to monitor our environmental performance and to set environmental objectives and targets that are under constant review
- complying with relevant legislation and regulations and having due regard to changing community standards
- meeting industry best practice
- continuing an improvement in:
 - the reduction in the consumption of resources
 - the reduction of waste produced
 - the prevention of pollution to the environment
 - design for the environment

Thinking Ergonomix makes a commitment to this environmental policy and will continue to develop areas of improvement.
